

# AVR<sup>®</sup>

## AVR Keyfob Field Programmer

The Atmel AVR keyfob is the ultimate in simple easy to use remote programming.

Allows untrained staff to upgrade code time and time again

How much does it cost you to upgrade in the field?

Trained Engineer	\$
Expences	\$
Travel costs	\$
Technical Equipment	\$
Delays	\$
	\$\$\$\$\$

Now you can upgrade anywhere in the world for the cost of the keyfob, postage and someone at the other end to press the button, nothing could be simpler.

The AVR keyfob is the smallest, lightest and most easy to use programmer on the market today.

### The kit includes:

- A Keyfob programmer
- An Alkaline Battery.
- An ISP Programming Adapter.
- An ISP Programmer.
- Software (Updates will be available on our website to support any new devices).

### It has the following features:

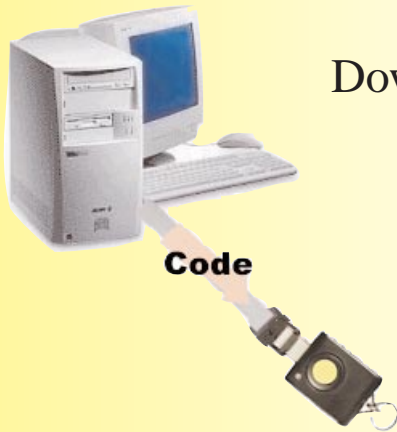

- Programs ALL AT90S Devices (Excluding Tiny), the Mega103 has a maximum code size limitation
- Programs Dataspace
- Programs FUSES (on devices which supports Serial Fuse 1 Programming)
- Programs Lockbits
- Program an ID into the Keyfob
- Programming code memory of up to 64kBytes.

### Keyfob specifications:

- Size 4.5 - 3 - 1.5 cm
- Weight 27g
- 23A 12V Alkaline Battery
- Draws no power from the battery if the target device is powered ie In System.
- Can supply 5 Volts if required to a bare device ie not In System.
- Auto sensing turning itself on and off when required.
